What Partner IT Does

Partner IT designs, supplies, deploys, configures and supports business technology across security, networking, cybersecurity, communications, storage/cloud and business systems. The delivery approach starts with the requirement and site conditions before product selection.

Core Solution Pillars

Security & Surveillance	CCTV, access control, alarm and environmental monitoring.
Networking & Connectivity	Managed Wi-Fi, switching, routing, structured cabling, fiber and wireless links.
Cybersecurity	Next-generation firewall, endpoint security, VPN and layered protection.
Communication & Collaboration	PBX, call center and video conferencing.
Cloud, Server & Storage	NAS, server, backup, cloud and email services.
Business Technology	ERP, automation, consulting and managed IT services.

Engineering Delivery Model

Discover -> Survey -> Design -> Supply -> Deploy -> Commission -> Support. Documentation, testing, labeling and customer handover are treated as part of the system, not optional extras.
